# COMPOSITE DECKING BROCHURE

COMPOSITEWOOD™

**COMPOSITE WOOD™**

## Who we are

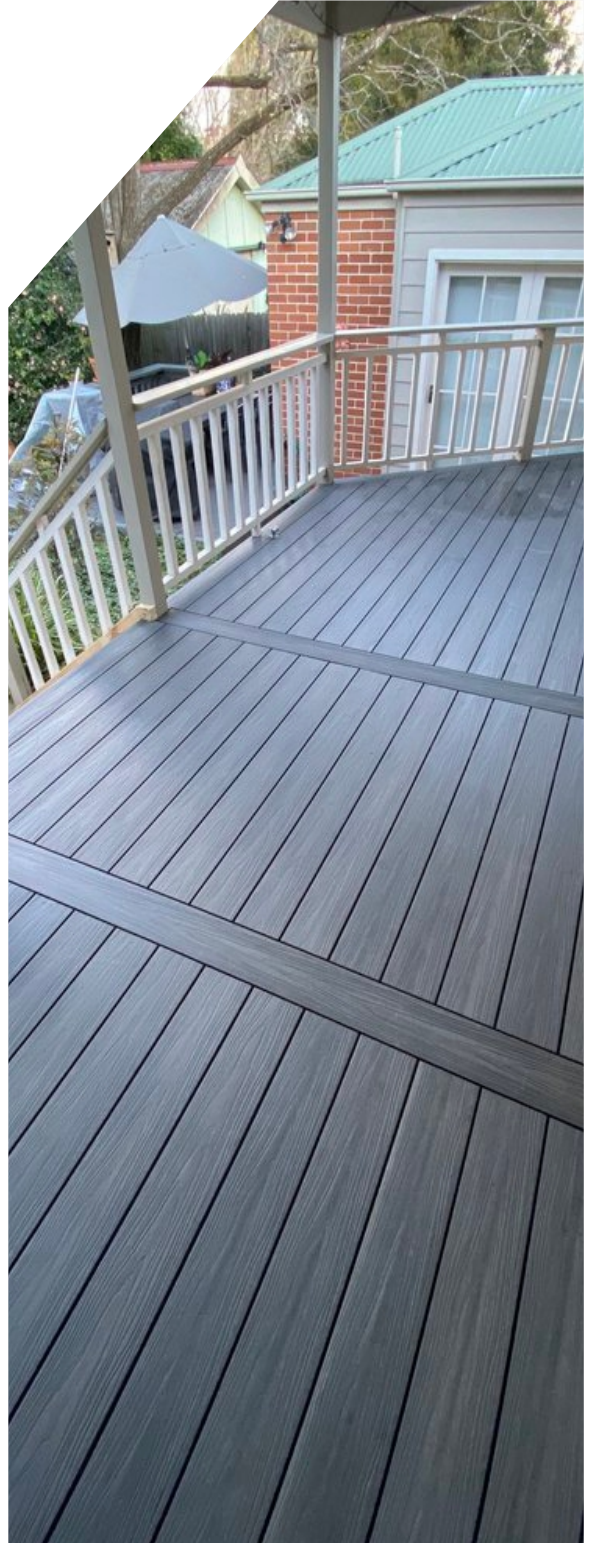

At Composite Wood we more than just a company that makes revolutionary products that are safe, durable and affordable, we are a brand you can trust.

We offer products of the highest quality and lowest maintenance while protecting our planet. This philosophy has enabled us to produce long-lasting and affordable products while conserving our environment.

All of our products are constructed of with 95 percent recycled materials, including 60 percent hardwood fibres, 35 percent high-density polymer, and 5 percent heat and UV stabilisers.

With our tough Australian climate in mind, we work hard to provide products that are sustainable, strong, and uniquely designed and engineered in Australia.

Our primary focus at Composite Wood is to provide high-quality and aesthetically- pleasing substitutes for wood that last for years without maintenance and upkeep.

## Features & Benefits

Composite Wood  
Timeless Strength – Beauty That Lasts!

Eco-Friendly

25 Year Residential Warranty

Very Low Maintenance

Slip Resistant

Strength and Durability

## Frequently Asked Questions

### What warranty is provided for Composite Wood ?

When you buy Composite Wood, you are protected by one of the best warranties our products have a warranty period of 25 years.

### Composite Wood or timber, which is more expensive?

Timber and composite decking can differ in both quality and cost. Generally speaking, timber tends to be more affordable initially, but it demands regular maintenance such as sanding, oiling, and sealing, which can be time-consuming and costly.

While composite decking typically has a higher upfront cost, the investment often pays off within a few years due to its low-maintenance nature. This means less time and money spent on upkeep, allowing you more time to enjoy your deck instead of maintaining it.

### Will the colours of Composite Wood fade?

No, as long-lasting as the products themselves, the colours of Composite Wood items are also made to last. Even the most trained eyes won't perceive the slightest amount of fading because of the usage of sophisticated UV filters.

### How is Composite Wood made?

Composite Wood is crafted using an innovative blend of materials designed to reduce environmental impact while providing exceptional durability.

Made from a combination of repurposed timber and recycled plastics, Composite Wood seamlessly integrates natural components with cutting-edge technology.

All Composite Wood products are made with 95% recycled materials, including 60% hardwood fibres, 35% high-density polymer, and 5% heat and UV stabilisers.

Made for, Australia our products are specifically developed to endure the Australian climate and all harsh weather conditions.

### How durable is Composite Wood decking compared to timber decking?

Our Composite Wood has been created with the most advanced technologies to support and resist all conditions of the Australian climate.

It's outer capping is constructed from a substance similar to that used in golf ball shells, making it extremely durable and robust.

Unlike timber, which will only last only if it's carefully looked after, Composite decking is considered highly durable and will last a long time with minimal maintenance.
